

See the third page for the Registrar's Office contact information. Completed and approved forms should be submitted to the Registrar's Office or via help@touro.edu using Touro e-mail address. Questions can be directed to help@touro.edu.

In accordance with New York State Public Health Law, Touro College requires that all students complete and return this form to the College Registrar's Office.

What is meningococcal disease?

Meningococcal disease is a severe bacterial infection of the bloodstream or meninges (a thin lining covering the brain and spinal cord.)

Who gets meningococcal disease?

Anyone can get meningococcal disease, but it is more common in infants and children. For some college students, such as freshmen living in dormitories, there is an increased risk of meningococcal disease. Between 100 and 125 cases of meningococcal disease occur on college campuses every year in the United States; between 5 and 15 college students die each year as result of infection. Currently, no data is available regarding whether children at overnight camps or residential schools are at the same increased risk for disease. However, these children can be in settings similar to college freshmen living in dormitories. Other persons at increased risk include household contacts of a person known to have had this disease, and people traveling to parts of the world where meningitis is prevalent.

How is the germ meningococcus spread?

The meningococcus germ is spread by direct close contact with nose or throat discharges of an infected person. Many people carry this particular germ in their nose and throat without any signs of illness, while others may develop serious symptoms.

What are the symptoms?

High fever, headache, vomiting, stiff neck and a rash are symptoms of meningococcal disease. Among people who develop meningococcal disease, 10-15% die, in spite of treatment with antibiotics. Of those who live, permanent brain damage, hearing loss, kidney failure, loss of arms or legs, or chronic nervous system problems can occur.

How soon do the symptoms appear?

The symptoms may appear 2 to 10 days after exposure, but usually within five days.

What is the treatment for meningococcal disease?

Antibiotics, such as penicillin G or ceftriaxone, can be used to treat people with meningococcal disease.

Is there a vaccine to prevent meningococcal meningitis?

Yes, a safe and effective vaccine is available. The vaccine is 85% to 100% effective in preventing four kinds of bacteria (serogroups A, C, Y, W-135) that cause about 70% of the disease in the United States. The MenB shots (called Trumenba or Bexsero) cover meningococcal serogroup B. The vaccine is safe, with mild and infrequent side effects, such as redness and pain at the injection site lasting up to 2 days. After vaccination, immunity develops within 7 to 10 days and remains effective for approximately 3 to 5 years. As with any vaccine, vaccination against meningitis may not protect 100% of all susceptible individuals.

How do I get more information about meningococcal disease and vaccination?

Contact your family physician or your student health service. Additional information is also available on the web sites of the New York State Department of Health, www.health.state.ny.us; the Centers for Disease Control and Prevention, www.cdc.gov/ncid/dbmd/disease/info; and the American College Health Association, www.acha.org.

TO BE COMPLETED BY THE STUDENT

Student's Name: _____ Date of Birth: _____
First Last MM/DD/YYYY

Student's Address: _____
(No. & Street) City State/Zip Code

Touro ID# or Last 4 Digits of SSN: _____ School/Academic Program: _____

Check one box and sign below:

- Had the meningococcal meningitis ACWY immunization within the last 5 years OR a complete 2 or 3 doses if MenB (students choosing this option must provide a vaccine record attesting to this statement at the time submission)
- read, or have had explained to me, the information regarding meningococcal meningitis disease. I will obtain immunization against meningococcal meningitis within 30 days from the submittal of this form.
- read, or have explained to me, the information regarding meningococcal meningitis disease. I understand the risks of not receiving the vaccine. I have decided that I will not obtain immunization against meningococcal meningitis disease.

Student's Signature: _____ Date: _____
MM/DD/YYYY
